

ANIMAL FEED INGREDIENT SUSTAINABILITY POLICY

Policy Statement:

2 Sisters Food Group is the trading name for Boparan Holdings Limited, which owns directly and indirectly UK & EU companies constituting the Boparan Group of Companies.

The Boparan Group aims to use only those ingredients in its animal feed that are considered to be responsibly sourced. We will deliver this commitment on the basis of encouraging our suppliers to purchase from sources which are recognised as being responsibly produced and where these do not exist working with industry and other interested parties to develop these sources.

Scope:

All meat including farmed fin fish used in Boparan Group companies.

Background:

Animal feed may contain a wide range of ingredients to ensure that the health of the animal it is fed to is maximised. The “recipe” used in specific feeds will change at different times depending on availability and quality of the raw materials. However, some of the key ingredients which are used have, in the past, been linked to issues of sustainability such as destruction of rain forests in South America and Asia and overfishing. The key ingredients used in animal feed for which there may be a sustainability concern are soya and its derivatives, fish meal and oil, and palm oil. The Boparan Group will encourage its suppliers to use feed manufacturers who produce feed in line with responsible production standards including:

- Protection of valuable ecosystems
- Prevention of deforestation or overfishing
- Protection of water resources
- Compliance with labour laws, local environmental legislation and land title
- Good agricultural and fishing practices

The Boparan Group, through its 2SFG Dutch operation, is a member of the Round Table on Responsible Soya.

For palm oil, 2SFG is a member of the Round Table on Sustainable Palm Oil (RSPO) and aims to encourage the use of RSPO certified palm oil in all feed used in livestock being killed at UKP.

The Boparan Group is committed, when fishmeal or fish oil is used in animal feed, to ensuring that it is sourced responsibly from managed fisheries (or those with fisheries improvement programmes). To this end we will work with bodies such as the Sustainable Seafood Coalition, the Marine Stewardship Council or Seafish to identify these fisheries and suppliers and ensure that our producers are sourcing accordingly.

The Boparan Group does allow the use of genetically modified (GM) ingredients in animal feed, this mainly being soya, oilseed rape and maize.
